

Abdelrhman Aboelmagd

Backend Developer (.NET)

✉ abdelrhmanmohamedghazy2000@gmail.com ☎ +201019669374  linkedin  Github  Tanta

PROFILE

.NET Backend Developer with a strong foundation in Computer Science principles and hands-on experience in building scalable Web APIs using ASP.NET Core. Proficient in software architecture patterns including Clean Architecture and CQRS. Experienced in performance optimization using Redis caching and securing APIs with ASP.NET Core Identity and JWT authentication. Passionate about writing clean, maintainable, and testable code following SOLID principles, and eager to contribute to production-grade backend systems.

EDUCATION

Bachelor of Computer Science at Tanta University, Egypt

Expected Graduation: 2028

SKILLS

Language: C#, C++, SQL

Technologies: ASP.NET Core Web API, .NET Framework, ASP.NET Core Identity, JWT, LINQ, Caching (Redis), Asynchronous Programming, Entity Framework Core (EF Core), Windows Forms, ADO.NET, Unit Testing

Database: SQL Server, T-SQL, MySQL

Architecture & Patterns: Clean Architecture, N-Tier Architecture, Specification Pattern, Dependency Injection, CQRS, Repository & Unit of Work, API Design, OOP Principles, SOLID Principles

Tools: Visual Studio, VS Code, Git, GitHub, Postman, Swagger

Professional Skills: Problem-Solving, Team Collaboration, Analytical Thinking, Fast Learner

PROJECTS

E-Commerce API

- Designed and developed a scalable E-Commerce API using Clean Architecture and CQRS (MediatR).
- Implemented product management, order processing, and authentication workflows.
- Reduced average response time by approximately 40% using Redis Distributed Caching.
- Secured APIs with ASP.NET Core Identity, JWT, Refresh Tokens, RBAC, and Policy-Based Authorization.
- Built the data layer using EF Core, Repository & Unit of Work patterns, and FluentValidation.
- Enhanced reliability through Rate Limiting, Audit Logging, and Global Exception Handling.

DVLD Project — Driver Licensing Management Desktop App

- Built a full-featured desktop application from scratch using C#, .NET Framework, and Windows Forms following 3-Tier Architecture for separation of concerns and maintainability.
- Implemented complete driver record management including add, edit, search, and delete operations with SQL Server as the data store via ADO.NET.
- Designed and developed a test result tracking system that records exam outcomes and automatically triggers license issuance upon successful completion.
- Supported multiple license types with full license lifecycle management — issuance, renewal, and replacement workflows.

LANGUAGES

Arabic: Native | **English:** Proficient

COURSES

Software Development & Computer Science Roadmap – Programming Advices

Advanced C#, OOP, Data Structures & Algorithms, Database Design & Advanced T-SQL, Web APIs
